

Good morning, sir I strongly support Uniform Civil Code. Just I want to share a reason for my support to UCC to you, in few years ago our country is called as **HINDUSTAN**, on that time we (India, Pakistan, Bangladesh, Nepal and some Muslim countries) are us together and live happily.

I'm sorry to share this. when the Christianity (Britishers) enters into our country they are just merchant. Then they introduced Christianity into Indians for their personal profit. And they achieved what they wanted, even at such a time in our country everyone fought against them without any difference of religion. But because of the success they achieved then, even now some religious people are working on ungodly activities called religious conversion. They are leading programs to destroy the cultural heritage of our country. I hope that this law will be a good lesson to all such people through the Uniform Civil Code (UCC).

And let me mention one more thing. Along with religion, caste also plays an important role in our country. Due to religious influence of this, many qualified students remain unemployed. In the name of reservations, some of who do not have the right talent joined as government officials and not capture the correct understanding of the problem without the knowledge of the proper solution. Due to their influence, corruption and irregularities are being given life even in the public sector such as roads and bridges. It is not my intention that everyone will be like that, but it is my concern that the government will crown those who do not have the right talent.

One thing noticed or not, every government job is allotted some jobs in the name of reservation, they are exempted in admission fee, age and qualifying marks. However, they (Reservation Candidates) are not utilizing it fully. Kindly remove the word reservation from all government jobs once and appoint them. I request that all those who are eligible make full use of their respective opportunities. I hope that the talent in our country will not be limited for the development of other countries, but the development of our country will also improve. Please forgive me if I am wrong. I shared my innermost opinion with you.

Thank you.
